

# Using Data to Inform Health Workforce Development

Arizona Center for Rural Health Workforce Data Resources

June 6, 2023

THE UNIVERSITY OF ARIZONA  
MEL & ENID ZUCKERMAN COLLEGE OF PUBLIC HEALTH  
**Center for Rural Health**

# Session Overview

- Identify health workforce data resources from the Arizona Center for Rural Health (AzCRH) and other sources like the Arizona Department of Health Services (ADHS),
- Describe how health workforce data can be leveraged in grant applications, policy briefs etc., to educate and inform stakeholders and,
- Collaborate to identify what health workforce data is needed to fully address health workforce needs in rural and underserved Arizona.

THE UNIVERSITY OF ARIZONA  
**CENTER FOR RURAL HEALTH**

**Annual Report FY 2022**

Health workforce **data and analysis** to inform program and policy development.

**Collaboration** with AzDHS Health Systems Development and other stakeholders.

**Training** through grants and partnerships with organizations like the AzAHEC and regional centers.

**Partnership** with AzDHS and Arizona Alliance for Community Health Centers (AACHC) to support [3RNet](#) a rural recruitment program for health professionals.

THE UNIVERSITY OF ARIZONA  
MEL & ENID ZUCKERMAN COLLEGE OF PUBLIC HEALTH  
**Center for Rural Health**

Improve the health and wellness of Arizona's rural populations.

# Health Care Context in Rural Arizona

Definitions of rural vary

Up to 25% of Arizona's population lives outside of a metro area

Low population, low pop. density, large physical spaces, longer travel distance/time to urban areas

Healthcare resources concentrated in urban areas

Fewer total health care providers and lower ratios of providers per population

AzDHS Rural Counties

# Access to Care

“The timely use of personal health services to achieve the best health outcomes” (IOM, 1993)

Agency for Healthcare Research and Quality (AHRQ) Elements of Access:

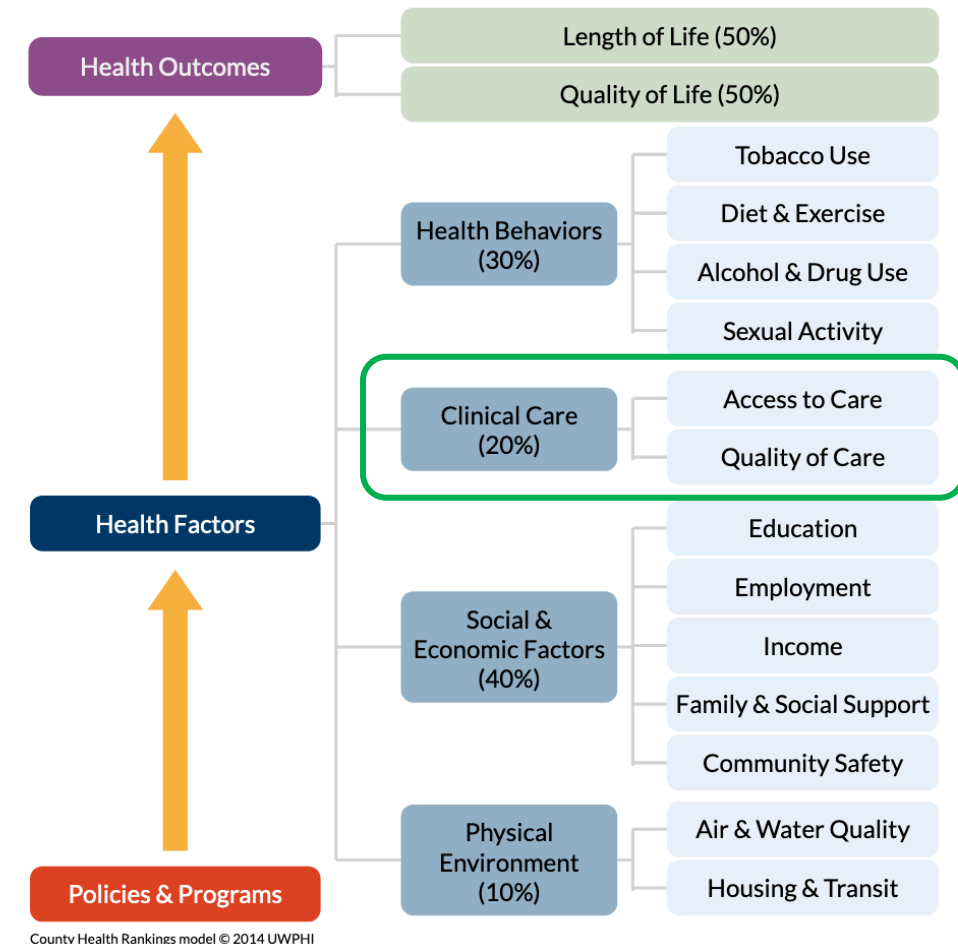

**Affordability:** facilitates entry into the health care system. Uninsured people are less likely to receive medical care and more likely to have poor health.

**Availability:** Having a usual source of care with the requisite resources (staff, equipment, etc.).

**Accommodation:** Timely ability to provide health care when the need is recognized, in a way that meets client preference and need.

**Acceptable:** Care is culturally appropriate, and client is comfortable.

**Accessible:** Services (workforce) are geographically proximal.

# Geographic Proximity

- Further away = less likely to receive care,  
Decreases the likelihood of receiving preventive care
- Disproportionately affects more rural, lower income, lower literacy, older, and under-resourced communities
- Costs include economic, time, social etc.
- Department of Health and Human Services (DHHS) travel standard > 30 minutes is excessively distant

# Data is Part of Health Workforce Development

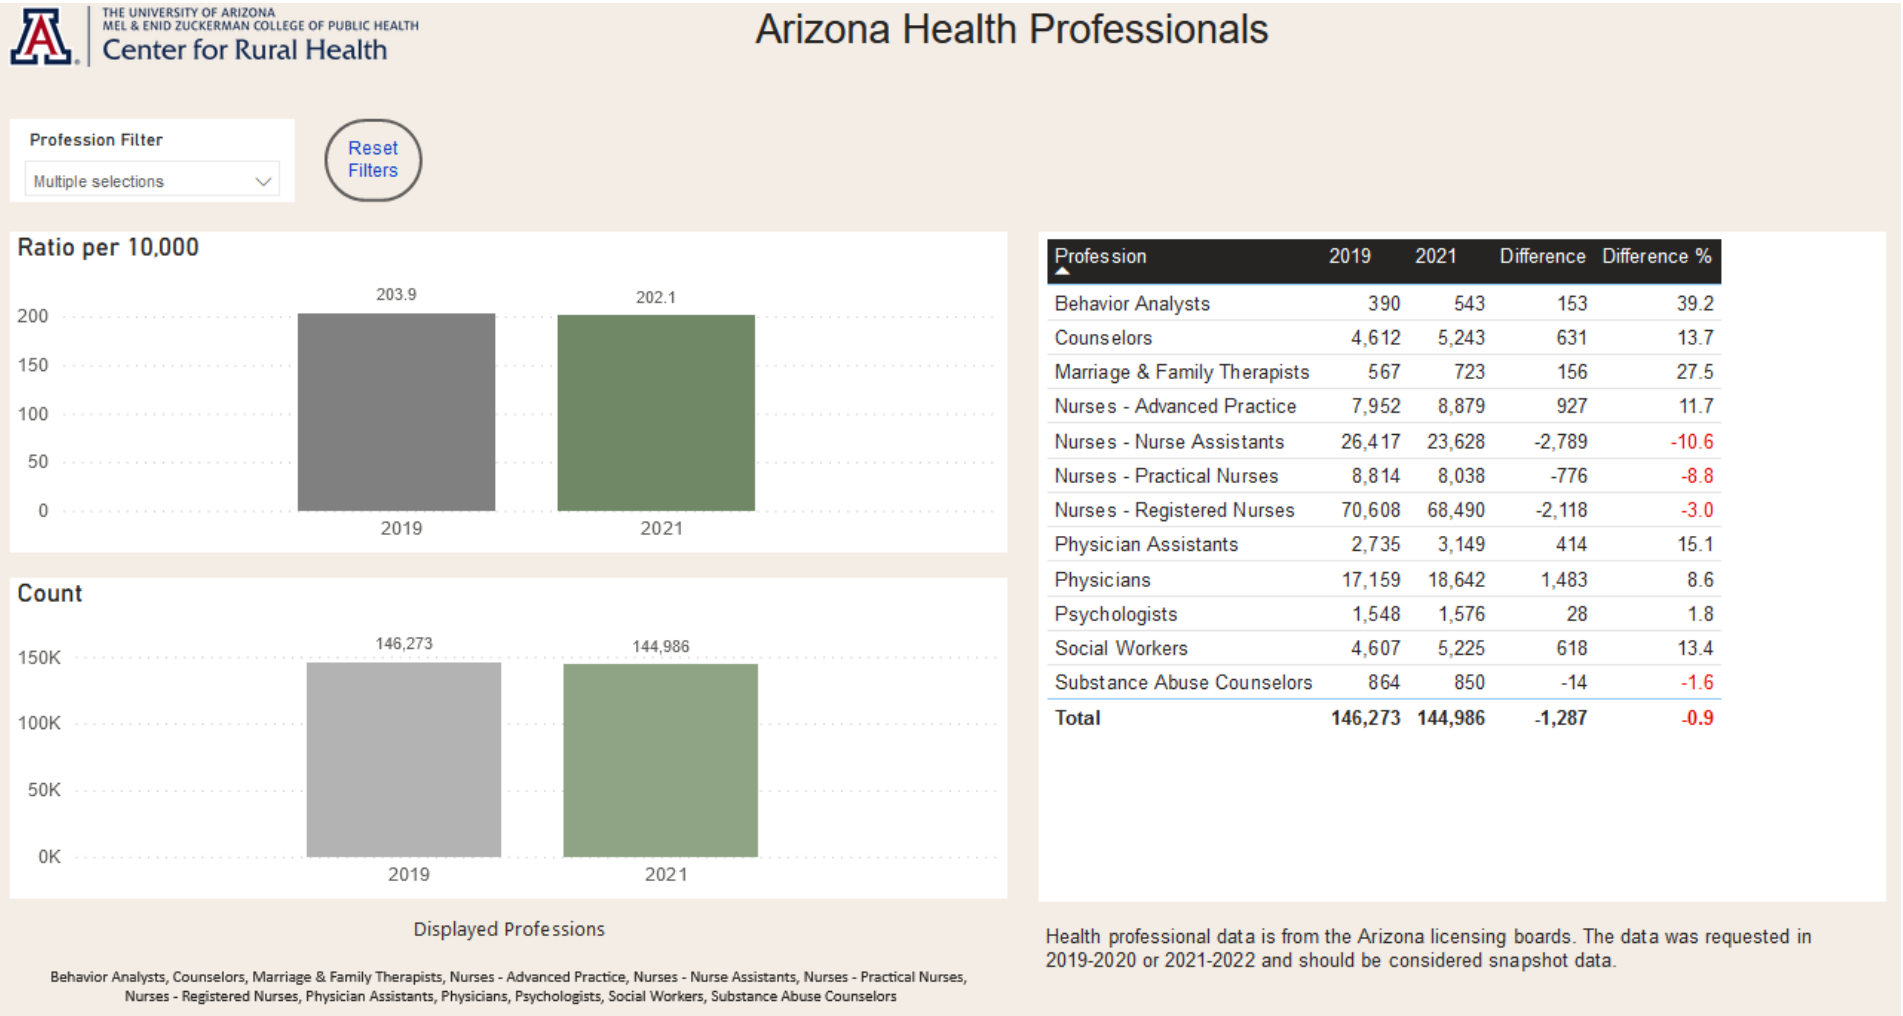

# Arizona Health Workforce Profile Report

# Arizona Health Workforce Profile Report

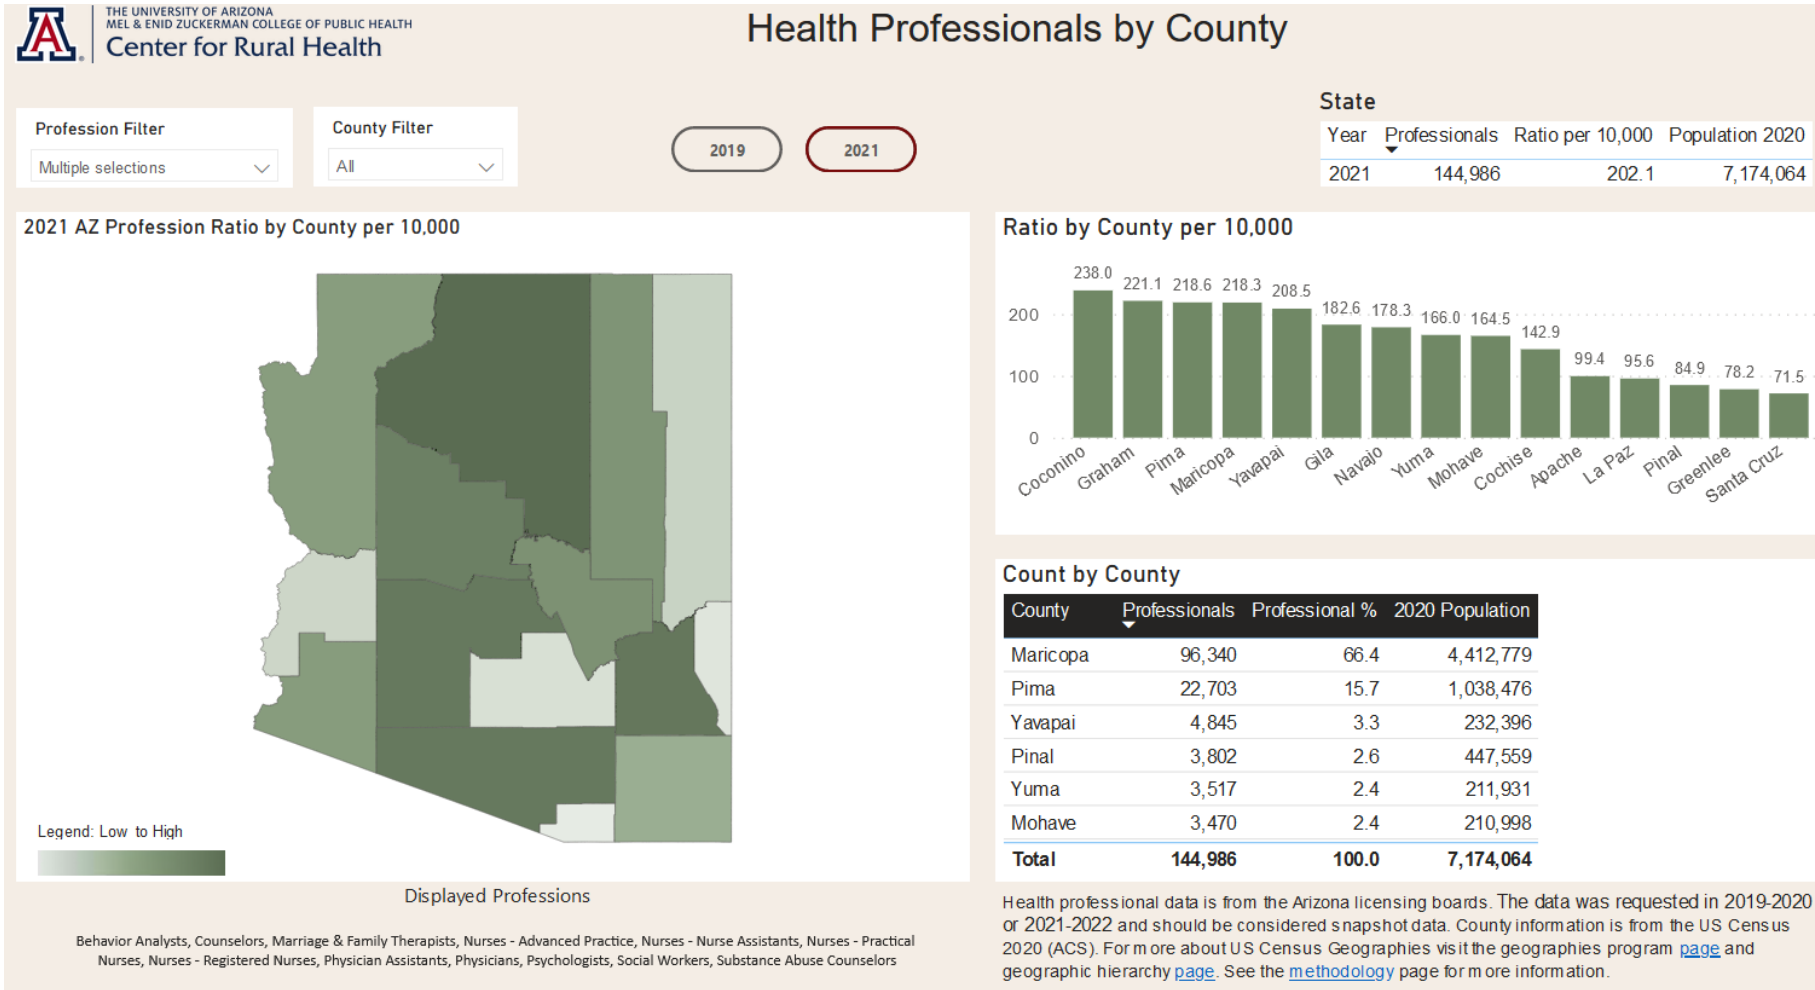

## Arizona Health Workforce Profile Report

# Sources of Health Workforce Data

- Healthcare workforce licensing data from the Arizona licensing boards:
  - Nurses (advance practice, registered nurses, nurse assistants, licensed practical nurses)
  - Physicians, physician assistants
  - Dentists, dental hygienists
  - Behavior analysts, counselors, marriage & family therapists, psychologists, social workers, substance abuse counselors
- Combined with geographic data, U.S. Census population data

## Health Workforce Data and Analysis

Given the ongoing transformation of the health and public health system in the U.S., it is essential for Arizona to collect, compile, analyze and report on the health workforce. It is important to provide data-driven solutions to address the existing maldistribution of the health workforce. This maldistribution creates workforce shortages and constrained access to care for populations based on geography, social-demographic, and other factors.

Education, training, retention and support for the rural health workforce is a core element of the mission of the Arizona Center for Rural Health (AzCRH). Workforce research is essential to making data-driven decision on health workforce policies and programs. AzCRH has published multiple reports on the health workforce since 2007.

The AzCRH health workforce data and analysis effort compiles, synthesizes and analyzes health workforce data and shares the data with public, policy-makers, and public health and healthcare stakeholders through online data visualization and other reports. The primary focus of the health workforce project is the creation of the Arizona Health Workforce Data System (AzHWDS). Data from the AzHWDS is used for the core Arizona Health Workforce Profile Report in the first tab below.

» If you are interested in summary workforce data for grants or other projects we may be able to assist. Please use the following [form](#) to tell us a little more about your interest and one of our team will follow-up directly with you!
